

Thank you for considering us to be your partner!

Here are a few commonly asked questions to get us started.

How much does my project cost to build? How long does it take?

It's impossible to provide a reliable estimate for a project without first doing the required research. ANY developer that gives a verbal, off-the-cuff estimate is just guessing. Guessing is a dangerous way to plan a project!

Historically, MVPs have been built within two to three months, around \$5000 to \$7500. Market-ready projects have been finished and tested within three to four months, approximately \$10,000 to \$15,000.

Do you work with people outside of the United States?

Unfortunately, we are only able to partner with organizations that are planning to incorporate or have incorporated within the United States, Canada, Australia and the UK.

How much equity does Codeventures ask?

Codeventures typically accepts between five and fifteen percent equity, depending on the amount of work to be performed. Large projects will require more equity, while smaller efforts usually necessitate less.

Does Codeventures leave the project after the end of the development phase?

Codeventures will happily continue to provide support and consultation to the project. After all, it is naturally in our best interest to help the company succeed now that we're partners.

How much time or participation does Codeventures provide as a co-founder for the project?

At the start of the project, we often meet at least twice a week to organize the project. Once project development commences, we meet weekly with our co-founders to provide updates.

Does Codeventures own the code after it's finished?

No, once the project is completed, Codeventures does not have sole ownership of the code. We never reuse work for future projects. The newly created corporation is given ownership of the project, of which CodeVentures will retain the equity amount agreed upon.

Will Codeventures sign an NDA before we talk about the project?

We would love to hear about your project, but it would take hours out of our day to receive, sign, scan, return, countersign, re-receive, and maintain NDAs for each of the people we speak with.

However, there's quite a lot that you can explain without risking your competitive edge. Assume you had a competitor soda to Coca-cola. You can tell us about the can, the taste, the ideal customer, your background, marketing plans after launch, and the general value of drinking your soda over the competition - all without disclosing the secret recipe.

Tell us everything up until the secret formula or inside information that might compromise your company with competitors. If it looks like a good fit for both of us, we can talk about other ways to protect your proprietary information.
